Class B Gross Cumulative Defaults Trigger	14.40%	7.0%	YES

"Cumulative Gross Default Level" means, on any Payment Date, the ratio between: (a) the Cumulative Outstanding Principal Amount of the Defaulted Receivables included in the Portfolio, and (b) the aggregate Outstanding Principal Amount of all Mortgage Loans of the Portfolio as of the Valuation Date.

Notes:

* Outstanding Principal Amount of Mortgage loans net of the Outstanding Principal Amount of all Defaulted Mortgage Loans (as of the relevant Collection Date)

** During the Initial 18 months period Available Redemption Funds will be deposited on the Principal Lock-in Ledger, held by the English Account Bank. This amount also includes the amount deposited on the Transaction Account during the Initial Period.

*** After the application of the Issuer Interest Available Funds at the relevant Payment Date

**** After the Principal redemption at the Payment Date

***** The "Class A Principal Subordination Event" ratio is calculated as A divided by B where:

A = the unpaid Principal Deficiency at the immediately preceding Payment Date following the payments and the provisions made on such date under the applicable Priority of Payments (Euro -) and

B = the Portfolio Initial Outstanding Principal Amount (Euro 2.183.087.874 = original Portfolio Initial Outstanding Principal Amount minus Euro 296.279.153). Please note that the original Portfolio Initial Outstanding Principal Amount has to be reduced of Euro 296.279.153 to take into account the receivables which were excluded from the transaction in 2007. In particular, those receivables did not comply with the "in bloc criteria" and, accordingly, pursuant to the Italian securitisation law, such receivables are to be considered as never having been transferred to the SPV. (Please refer to the related Moody's and S&P Announcement, March 2008 for more details).
